Education

BE in Computer Engineering

2021-Present

Lebanese American University (LAU)

- Machine Learning, AI, LLMs, Statistics, Advanced programming and Data structures, and algorithms concepts.
- Minor in Mathematics including Real Analysis and advanced computation theory.

Work Experience

AI Engineer – INMIND.AI

October 2025 – Present

- Worked on various projects mainly in the R&D division.
- Used my skills in research and AI to work on several projects.
- Teach my skills in AI and Data Engineering to teach in the inmind academy
- Handled Internal Agentic Product Architecture and Debugging.
- Handled Customer Support Chatbots from development to deployment.

Lab assistant – Lebanese American University

Sep 2025 – Dec 2025 / Sep 2026 – Present

- Assisting Professors in courses (Microelectronics & Testing for Digital Systems) using Synopsys EDA Tools.
- Provided Labs for students and support to complete them.

Software Engineer Part-time – MERAKI

February 2025 – August 2025

- Developed on demand platforms using Python, PHP and JS.

R&D Vision Engineer – BMW GROUP

August 2024 – December 2024

- Manipulated SORDI.AI dataset and applied many different augmentation methods to the synthetic data.
- Contributed to many pipelines used to manipulate, process, and create 3D point cloud from BMW factory scans.
- Performed literature review on the different ways of point cloud processing, and ways to perform many different tasks on them like object detection/classification and semantic segmentation.
- Used Isaac-Sim (Nvidia Omniverse) to perform scene scans, augmentations and processing of 3D point clouds.
- Developed and improved Nvidia Omniverse extension to create LIDARs and annotate real point clouds.

Data Engineering Track – INMIND.AI

January 2023 – March 2023

- Completed the data engineering and app development track of Palantir, Foundry.
- Learned correct use of foundry apps like Code Repository, Workshop, Contour, Ontology Manager, Pipeline Builder
- Learned and implemented solutions using PYSPARK, SQL, PANDAS, POWER BI, and TABLEAU.

Software Engineer – INVIGO

October 2023 – August 2024

- Refactored and reformed PHP legacy code to better suit best practices and improved API Request & Response.
- Migrated platforms that telecom companies use for employee activity tracking to new UI in Vue.js.

Software Engineer Intern – INVIGO

June 2023 – August 2023

- Implemented Python scripts to parse, clean, and organize various server KPIs and errors of servers.
- Designed and developed an interactive dashboard using jQuery, Bootstrap, and PHP to display data for analysis.

Software Engineer Intern – Galactech.io

May 2023 – August 2023

- Designed and architected an AI-integrated API for businesses using OpenAI API.
- Implemented a full-stack website on Laravel for Lebanese touristy locations using RESTFUL API.

Publications

Quantum State Preparation via Neural Network Encoding in Quantum Machine Learning – ArXiv

Major Revision in Physical Review Research

MIRA-Math: A Benchmark for Minimal Information Requesting and Mathematical Reasoning – ArXiv

Submitting to Transactions of the Association for Computational Linguistics

2 incoming submissions related to KV Caching and PINNs for electronics

Certifications

Digital IC Design – SYNOPSYS

2025

Skills: Digital IC Design – Analog Design – Verilog – TCL – Perl

Palantir Foundry Data Engineer Associate – PALANTIR

2024

Certificate No.: 3vkrvxuyjcfa

Extra-Curricular Activities

- IEEE Student Branch Chair 2026 – Present
- IEEE AI Club President 2026 – Present
- IEEE AI Club Board Member 2023 – 2024 & 2025 – Present
- Computer Engineering Student Representative 2025 – Present
- Google Developer Student Club Core team 2022 – Present
